

ultra-widefield retinal imaging

optomap:

- ✓ Fast, easy, and comfortable
- ✓ May alleviate the need for dilation
- ✓ Provides a permanent record for annual review

As a safety precaution this office is performing an **optomap** on all patients. An **optomap** image captures up to 82% of your retina in a single image, with less time spent in your examination-which may lower risk to you and the staff. These images help the doctor assess the health of your eyes and check for conditions including macular degeneration, glaucoma, and retinal detachments. *These problems can threaten vision without warning or symptoms.*

Serious health problems unrelated to the eye such as diabetes, hypertension, heart disease, some cancers, and auto-immune disorders, may also be detected with an **optomap** image.

The cost of the **optomap** is ~~\$39.~~ \$29

_____ I understand that I will be receiving an **optomap** image as part of my eye exam today and do not have any questions.
